

The 'Bot Spot'

Hire a robot, to make
your event truly
memorable!

It's estimated 75% of event attendees are likely to support your organisation post-event. What better way to engage people, than a versatile robot that's fully-programmable and can get messages across, in a fun and novel way?

360Globalnet
Disruptive Without Disruption

360Globalnet, a digital technology company, offers robots for hire. From sharing the stage with well-known speakers, to meeting and greeting guests, or entertaining the crowd, with simple routines; our robots have helped businesses and charities to meet and exceed their event objectives.

Meet the Bots...

Our robot family is unique. Powered by electricity and compressed air, the 360Globalnet 'Bots' are life-sized humanoid robot actors and we have several to choose from:

Boris

Head of the family, Boris is a seasoned pro who looks after his siblings, like a true Big Bro should. Bossy but eminently likeable.

Capabilities*

- > SHORE™ technology
- > Telepresence
- > Voices available: Graham and Rachel

Norris

The second 'son' caused a stir inaccurately guessing the ages of unsuspecting members of the public on a live Radio phone-in.

Capabilities*

- > SHORE™ technology
- > QR code reader to play performance
- > Voice: Peter Sad

Doris

Our new girl, everyone loves straight- talking Doris. She's like the boys but with a cuter nose and ears.

Capabilities*

- > SHORE™ technology
- > Telepresence
- > Voices available: Rachel and Lucy

Morris

The shiny new boy of the clan, Morris crossed the Atlantic in the Fall and is now only available for hire in the USA.

Capabilities*

- > SHORE™ technology
- > Voices available: Peter Sad, Graham and Rachel
- > Can have additional US voices added

*See opposite for technical details

Technical Features

A technician, provided by 360Globalnet can support your event on-site, for a fee.

Providing there is electricity and equipment can be accommodated, most venues can be accessed.

Controlled via a separate kiosk or via a laptop (with enabled software), each robot has an on-board wi-fi router.

Each robot has one or more pre-programmed 'voices', go to www.acapela-group.com to hear how each voice sounds.

Each robot speaks English. Additional languages can be added, for a fee.

Robots fitted with the SHORE™ facial recognition ID system are able to guess an onlooker's age, mood and gender. WARNING: This is not 100% accurate!

With telepresence you can control the robot's movement and colours via a tablet. A guest can talk to the robot through a standard microphone and you can hear what's being said through headphones.

Pre-programmed routines can be assigned a QR code; the robot responds to the specific QR code when (s)he sees it (requires LAN).

An internet LAN connection is required for full capability.

360Globalnet can also hire a 360Mediaport, a cellular wi-fi device, for guaranteed and uninterrupted internet access throughout your event.

360Globalnet is fully aware that for an event to go smoothly, a lot needs to work concurrently. That's why we provide technical support at your event and offer assistance to pre-programme robot routines, as well as full logistics support, for set up and access to venues.

"Boris was the star of the show at a recent industry event, putting our company on the map with new prospects and reinforcing messages about our full range of services to existing clients. It was great to have a stand that was so popular at a packed show; many of our visitors just couldn't resist their curiosity to see such an unusual exhibit – a life-sized humanoid robot! I'd recommend a robot if you want a different and fun way to engage your stakeholders. In fact, it created so much interest a few more staff would have helped, as sometimes enquirers were three-deep, waiting to talk to us. Would I do it again?

Yes, without a doubt."
